

asn1__parser2array(3)

asn1__parser2array(3) libtasn1 asn1__parser2array(3)

NAME

asn1__parser2array - API function

SYNOPSIS

```
#include <libtasn1.h>
```

```
int  asn1__parser2array(const  char  *inputFileName,  const  char
*outputFileName, const char *vectorName, char *error_desc);
```

ARGUMENTS

const char * inputFileName specify the path and the name of file that contains ASN.1 declarations.

const char * outputFileName specify the path and the name of file that will contain the C vector definition.

const char * vectorName specify the name of the C vector.

char * error_desc return the error description or an empty string if success.

DESCRIPTION

Function that generates a C structure from an ASN1 file. Creates a file containing a C vector to use to manage the definitions included in inputFileName file. If inputFileName is “/aa/bb/xx.yy” and outputFileName is **NULL**, the file created is “/aa/bb/xx_asn1_tab.c”. If vectorName is **NULL** the vector name will be “xx_asn1_tab”.

RETURNS

ASN1_SUCCESS if the file has a correct syntax and every identifier is known, **ASN1_FILE_NOT_FOUND** if an error occurred while opening inputFileName , **ASN1_SYNTAX_ERROR** if the syntax is not correct, **ASN1_IDENTIFIER_NOT_FOUND** if in the file there is an identifier that is not defined, **ASN1_NAME_TOO_LONG** if in the file there is an identifier which more than **ASN1_MAX_NAME_SIZE** characters.
