ASIN(3)

ASIN(3) Linux Programmer's Manual ASIN(3)

NAME

asin, asinf, asinl - arc sine function

SYNOPSIS

```
#include <math.h>
double asin(double x);
float asinf(float x);
long double asinl(long double x);

Link with -lm.

Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

asinf(), asinl():
    _BSD_SOURCE || _SVID_SOURCE || _XOPEN_SOURCE >= 600 ||
    _ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L;

or cc -std=c99
```

DESCRIPTION

The asin() function calculates the principal value of the arc sine of \underline{x} ; that is the value whose sine is x.

RETURN VALUE

On success, these functions return the principal value of the arc sine of \underline{x} in radians; the return value is in the range [-pi/2, pi/2].

If \underline{x} is a NaN, a NaN is returned.

If $\underline{\mathbf{x}}$ is +0 (-0), +0 (-0) is returned.

If \underline{x} is outside the range [-1, 1], a domain error occurs, and a NaN is returned.

ERRORS

See **math_error**(7) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error: <u>x</u> is outside the range [-1, 1] <u>errno</u> is set to <u>EDOM</u>. An invalid floating-point exception (<u>FE_INVALID</u>) is raised.

CONFORMING TO

C99, POSIX.1-2001. The variant returning $\underline{\text{double}}$ also conforms to SVr4, 4.3BSD, C89.
